## INDUSTRIAL REFRIGERATION ALARM PANEL

### Features:

- Helps protect against costly equipment failures
- Comes with 12 channels standard
- Switchable between direct and delay dial-out
- Hardware and software customizable
- Ideal for Supermarket applications
- Meets UL 873

### Description:

Each Alarm Panel is manufactured per UL 873 and under goes rigorous testing including 100% function testing. Top of the line Phoenix® connectors are used on all versions to provide rugged and reliable connections. Dependable surface mount technology with solid-state switching provides solid performance year after year. On board DIP switches allow the user to select between direct dial-out and 15 minute delay dial-out. A 24 VAC output voltage is provided to operate strobe warning lights or other alarm devices. The built in program can easily be modified to meet a customer's specific needs. The circuit board and enclosure may be adapted to any customer requirement.

### Specifications:

Main Power Input Voltage: 24 VAC  
Signal Output Voltage: 24 VAC  
Channels: 12
